### Description

The TD20MCA divider is a general purpose test accessory designed for microwave, communications and test applications. The accessory provides divide-by-1, divide-by-2, divide-by-4, or divide-by-8 output. Inputs and outputs are AC coupled. The divider is self contained and plugs into standard AC power sources.

### Application

The TD20MCA divider can be used to extend the trigger range of high speed sampling oscilloscopes. Precision timebase measurements will benefit from the very low added jitter and fast waveform edges. The TD20MCA can be used to generate synchronized, high frequency clocks from existing sinusoidal, synthesized sources. The low 1/f phase noise characteristics of the divider will benefit high frequency phase lock loop designs.
